

Racing Tools

Moonflex Diamond Files

The special pattern of the Moonflex file gives optimum cutting with a long life and little clogging. In 5 grades:

- Black - 100 grit
- Red - 200 grit
- Yellow - 400 grit
- White - 600 grit
- Blue - 1500 grit

Wintersteiger Discman

The Discman is the ultimate ceramic disc hand tool. It gives a very accurate, burr-free side edge between 90° and 85° by ½° steps.

The edges are more accurate, and therefore grip better and stay sharper longer. The Discman uses rechargeable batteries for power and is suitable for use around the Dry Slope circuit.

Thermo Jomax Alpine

This is a heated blanket to give optimum penetration of base wax into both new and used race skis. It operates between 55° and 65° for a period of 90 minutes to give full wax penetration.

Jomax Tuning Tool

This is the best tuning tool money can buy - and at £599.95 it should be!

Supremely accurate, can tune skis in ways that other hand tools can't come close to. If used correctly it is better than a £85,000 edge tuner
